

DentalFlow — Edits & Suggestions

1. Login Screen & User Types

We need a simple login screen with **two types of logins**:

1. Owner / Staff Login

This login should provide access to all the features and functionality available in DentalFlow.

2. Patient Login

The patient login should have a much simpler interface, focused only on patient convenience.

The patient portal should have **three sections only**:

A. My Portal

A simple dashboard with:

- A welcome message
- Next appointment
- Total number of appointments
- Total completed visits

The dashboard should also display the complete details of the patient's next appointment:

- Date and time
- Practitioner
- Reason/type of appointment

B. My Appointments

This section should allow patients to book appointments through a simple **4-step process**:

Step 1 — Choose Appointment Type

Examples: Hygiene & Cleaning, Check-up, Teeth Whitening, etc.

Step 2 — Choose Practitioner

Display the available practitioners so the patient can select who they would like to book with.

Step 3 — Choose Date & Time

The patient selects their preferred available date and time.

Step 4 — Review & Confirm

Display all appointment details for the patient to review before confirming the booking.

C. My Treatment Plan

This section should display the patient's current treatment information and treatment plan.

The patient portal should contain only these three sections: My Portal, My Appointments, and My Treatment Plan.

2. Dashboard

The dashboard should feel a little more visually engaging while still maintaining a professional look.

- Use **slightly brighter colours** to highlight important information, similar to the demo website.
- Add the **analytics graphs** to the main dashboard.
- Use better, slightly brighter colours for graphs and pie charts so the data is easier to distinguish.
- Improve the graph-loading animation when the dashboard reloads so that it feels smoother and more polished.
- When hovering over a graph or chart, clearly indicate what each colour represents.
- The transition between different sections/colours of the graphs should feel smooth when moving the cursor.

Practice Dropdown

The demo website has a dropdown that allows the owner to select a practice and view its data.

Please add the same functionality to the deployed version.

For now, **there is no need to create different data for each practice**. The same sample data can be displayed regardless of which practice is selected.

3. Appointments

The appointment entries should display more relevant information, including:

- Patient name
- Practitioner name
- Appointment/treatment type — e.g. Check-up, Teeth Whitening, Extraction, etc.
- Appointment date and time

- Appointment duration

The overall layout should also be made **simpler and easier to scan**, similar to the demo website.

In the deployed version, the practitioner and patient names currently appear in a smaller and lighter font. These should have better visual prominence so they are easier to identify at a glance.

4. Patients

The information currently displayed in the Patients section is relevant and sufficient.

However, the **Edit Patient** functionality needs to include more information.

The following fields should be available when adding or editing a patient:

- First Name
- Last Name
- Date of Birth
- Gender
- Phone
- Email
- Address
- Medical Notes — allergies, medical conditions, or other relevant patient information
- Emergency Contact Number

These details should also be displayed appropriately in the **main Patients table/profile view**, rather than only being available when editing the patient.

5. Inbox

No changes required.

The Inbox section is actually better in the deployed version, so we can keep it as it is.

6. Follow-Ups

The Follow-Ups section should have **predefined messages for different follow-up situations**.

For example:

- Appointment reminder — **30 minutes before the appointment**
- No-show follow-up
- Cancelled appointment follow-up
- Missed-call follow-up

When a particular condition occurs, DentalFlow should automatically identify the relevant situation and prepare the appropriate follow-up message.

The message should then appear **ready to send**, with an:

“Approve & Send” button

Clicking this button should directly send the prepared follow-up message.

The idea is that the team shouldn't have to write these messages manually each time. DentalFlow should prepare the appropriate message based on the situation, while keeping the final approval with the staff member.

7. AI Call Summary

No changes required.

The AI Call Summary section is actually better in the deployed version, so no edits are needed here.

8. Practitioners

Add an:

“Add Practitioner” button

This should allow the practice owner/staff to add a new practitioner to the system.

9. Analytics

The Analytics section should be made more visually engaging and easier to interpret.

- Use better, slightly brighter colours.
- Make the charts and graphs stand out more clearly.
- Ensure the data is easy to understand at a quick glance.
- Keep the overall design consistent with the improved Dashboard visual style.
